- Print sales reports within a date range
- Collect program data from terminals
- Edit or add new products
- Collect customer transactions
- Invoice customers
- Hold accounts for customers
- View customer transactions
- Edit or add new customers

Myradon Extra software is designed to run on a backoffice pc connected to touchscreens running ICRTouch software. It can be used in any retail outlet, from bars to retail shops.

It is particularly useful for invoicing account customers.

Scenario 1:

A restaurant provides loyalty account cards to employees from a local estate agents. Each time the employee uses their card for a meal, the details are collected by Myradon Extra daily, and detailed invoices are sent to the estate agents, along with account statements.

Scenario 2:

A butchers shop provides meat to a local restaurant. The meat is weighed on scales linked to ICRTouch, the details are collected by Myradon Extra daily, and detailed invoices are sent to the restaurant for billing.

Scenario 3:

A pub needs to know how much money has been taken daily and what products have been sold quarterly for stocktaking. ICRTouch terminals in the bar & lounge have a scheduled 'Z Read' by Myradon Extra daily, and reports are printed detailing items sold, financial breakdown and tax amounts.
